Status: 2013-10-01
These terms of delivery are valid for all production-sites of the CEWE-group. Deviations from these terms of delivery require prior written consent of the central procurement department at CEWE Stiftung & Co. KGaA.

1. Loading units
By default, only undamaged Euro flat pallets, 1200x800 mm, DIN 15146/ 2, RAL-RG 993, may be used. Especially floor boards and blocks have to be in excellent condition. Please note that damaged pallets can be rejected. The same applies to the unconfirmed delivery on non Euro pallets. Deviations from this standard may result in a handling fee of EUR 40,-.

2. Height of loading
Standard height is \( h = 125 \) cm.
The maximum height \( H = \text{standard height} + 15 \text{ cm palett height} \).

3. Weight of loading
The maximum standard weight (load + palett) is 500 kg.

4. Cargo protection
For additional protection anti skid PE stretch wrap film should be used. The film must be transparent and must not be contaminated by labels etc.

5. Stacking of goods
Interlocked stacking of packages is preferred. In general only one kind of article per pallet is allowed. Pallet overhang is not allowed.

6. Labeling
Deliveries have to be labeled with barcode type Code39 (ISO/IEC 16388). The barcode has to contain the CEWE article number and the quantity for electronic booking. To ensure readability there has to be an underscore between both. Single variety pallets have to be labeled on the long side. The barcode has to be attached at the upper edge of the pallet.
In case of cargo protection with PE stretch wrap film, labeling must be attached on the outside of the PE film.
In case the delivery is not a single variety pallet, the barcode must be attached to the cardboard boxes. The standard barcode-size for pallets is ca. \( 17 \times 6 \text{ cm} \), for cardboard boxes ca. \( 12 \times 4 \text{ cm} \).

delivery regulations

Status: 2013-10-01

7. Bill of delivery
To ensure an efficient incoming goods control, the bill of delivery has to comply with our minimum standard. Each bill of delivery must be labeled with a barcode containing the CeWe purchase order-number (code 39). The single positions of the bill of delivery need to contain the CeWe article number, the delivered quantity and the amount of loading units delivered.

7. Delivery times
<table>
<thead>
<tr>

</tr>
<tr>
<td>Friday</td>
<td>7.00 A.M. - 12.00 P.M. (noon)</td>
</tr>
</tbody>
</table>

8. Unloading capabilities
Unloading at CEWE Oldenburg is made via ramps. In all other CEWE subsidiaries goods are unloaded by forklift.

9. Quality assurance
To ensure faultless goods the supplier has a quality management system in place. In case of subsuppliers, the supplier will inform these sub-suppliers about CEWE’s Terms of Delivery and ensure adherence thereto.

10. Notice of defects
With goods, whose condition can only be determined completely when put to use, CEWE is not obligated to the careful investigation and notice of defect before putting to use. In the case of an existing material defect the removal of the lack and the resulting expenditures in order to ensure supplementary performance have to be taken over by the supplier.

11. Lead time
Agreed lead times are binding. In case lead times cannot be kept, the supplier is held fully responsible for any damage caused. If lead times cannot be kept, the supplier must inform CEWE immediately. Standard lead time is three days within the European Union.

12. Conditions of purchase
The valid CEWE conditions of purchase apply accordingly.
